

Unipower[®] HPL440 Load Monitor

Conveyor Overload Monitor with Un-Block Function

A member of the HPL400 Series Programmable Digital Load Monitors for machinery monitoring, supervision and control.

HPL440 measures motor power, kW[%], with overload detection and auto-reverse:

- **Max. limit** - overload alarm
- **Motor reversal un-blocking function**

Plus auxilliary functions:

- **Remote reset**
- **Analog 4-20mA output** of kW[%]
- **Phase order and assymetry** alarms
- **Program locking**

Full digital design

no pots, no dials, no screw-drivers!

Monitor any size motor
(external CT >8A)

Compact DIN or pannel mount
only 2" of rail space!

Peak/Min. kW capture for accurate limit setting
no guessing!

The HPL440 is designed for overload supervisor of conveyors and features a motor reversal unblock function. The number of reversal attempts along with the dwell periods and duration of reversal are all programmable.

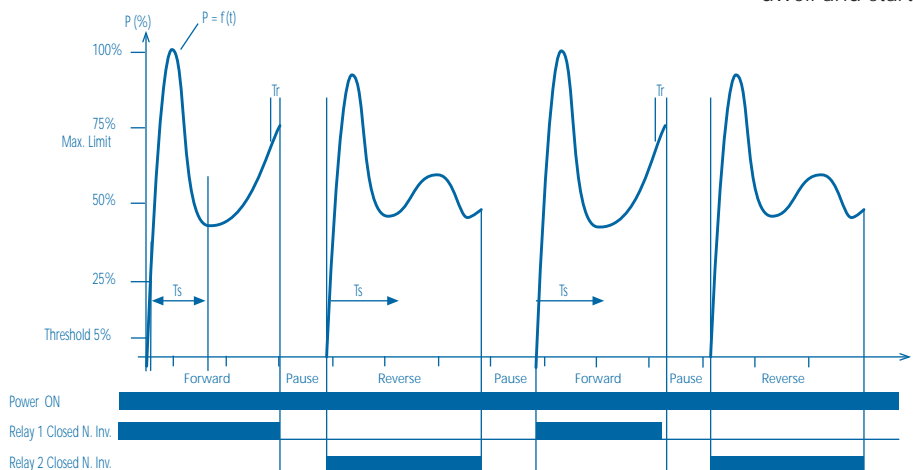

Also, overload detection remains active during reversal and a reverse overload triggers an immediate shut-down with no further unblocking attempts.

Function:

The drawing shows a typical AC-motor power curve (ex. Conveyor). The start timer (T_s) filters out from regulation the large power surge on start-up; when T_s expires, limits and T_r become active. When power exceeds Max. Limit, T_r starts and a max. alarm is declared at the end of T_r - Relay 1 is switched. This starts the un-block sequence of dwell, reverse (triggered by closure of Relay 2), dwell and start forward.

If Max. Limit is again exceeded, the sequence is repeated until the allowed number of repeats has been reached.

If Max. Limit is exceeded in the reverse direction, an immediate un-recoverable shut-down is initiated.
